

BurButler Crystal Range

The Dental Bur Management System

www.dentalorganiser.com

Features and Benefits

PRODUCT

1. Tapered holes, filiform, fluted design, through and through base:
 - Every bur of any size, fits every hole.
 - The diameter of each bur grips the silicon walls at the diameter of the bur.
 - The individual dentist can set up their own burs in the order they want.
2. Five Colours : Sapphire Blue - Ruby Pink - Diamond White - Amethyst Purple - Amber Orange
3. New size options: 5 hole bases, 10 hole base, 25 hole bases, 60 hole bases, with low lids and high lid for 25 hole base
 - Each dentist in the practice can choose one colour per surgery or per procedure..
 - Organises bur for each surgery, will always be returned to the same surgery.
4. Flexibility and durability of solid silicon with ideal spacing of holes.
 - Uncluttered spacing allows easy insertion and safe manipulation for fingers big and small.
 - The flexible silicon flexes with the force of insertion, which equals the force needed to withdraw the bur.
 - Thus the grip is tailored to the individual dentist.
5. High temperature resistant silicon base. New “rebated” base design. Improved finish rounded edges
 - Durable, cleanable, compliant with washer disinfectant & autoclave.
 - The platinum tooling and natural antimicrobial effect of silicon give a durable solution
 - Base re-design allows dissipation of silicon base expansion with autoclaving, preserving the lid integrity.
 - Wide base gives stability, “holds / sticks” to clinical surfaces and even bounces if dropped.
6. Clear autoclavable polycarbonate full skirt lid.
 - Ribbed design allows steam penetration for autoclaving.
 - Clarity allows visualization of contents without removal of lid.
 - Closed “skirting” gives dust control for improved storage.
 - Lid may now be Logo’d.
7. Non magnetic bur retention.
 - Burs will not be magnetized and stick to other instruments.
 - Less frustration
 - Fewer lost burs
8. No replacement inserts required.
 - The durability and volume of material means that repeated use will not wear the hole
 - Some systems have inserts which perish, causing lost burs and plumbing / engineering fees and replacement bur costs.
9. Independent Bacteriological studies by Prof. David Coleman Oral Microbiological and Material Science. Dublin Dental Hospital.
 - Confidence in efficacy and safety.

Every dentist, every hygienist, every assistant, every day, every appointment, every patient.

Clearly Better “Love your Burs”
